

12-month rolling drug overdose-related death rate by mechanism of overdose in the United States
Temporal trends from 2015–2024 with identified change points in death rate

Notes:
1. Data shows 12-month rolling death rates per million population by overdose mechanism.
2. Points represent observed rates, solid lines show trends, and dashed vertical lines mark time points where the direction of the trend changed.
3. Change points were identified by examining the slope of the trend lines over time.
